

Investmentmatters – “Off the Peg Timing Charts”

Unlike "fundamental analysis," which leaves much to human interpretation, Charts never lie as "**price is what it is**"

Today's investment markets are dominated by mutual funds' (collectives known as Unit and Investment trusts, OEICs, ETFs) with most being predominantly "index-trackers," so it is important to know how the main geographical stock-indices have performed, and more importantly, are likely to perform.

The "**Off the Shelf**" service does just that for the main stock indices of the US, UK, Europe X UK, Japan, Asia X Japan and the \$US Gold price

A **Currencytiming** service is available on a sister site whereas the "Bespoke" service offers the same template for any other quoted security, be it a stock-index, individual share, bonds, fund, or commodity.

Each area consists of a 1-year daily data chart and a 10-year+ monthly data chart, which include the colour-coded **Buy**, **Sell** and **Neutral** panels, moving averages, momentum indicators and Fibonacci ratios, which provide likely support levels for price corrections.

These are covered and explained within the video guide.
